- Interferencias con otras instalaciones
- Condicionantes de ventilación
- Pruebas

A photograph of a wall-mounted gas control valve assembly. The assembly consists of a vertical metal pipe on the left, connected to a horizontal metal pipe that runs across the wall. From this horizontal pipe, three vertical pipes descend, each equipped with a yellow-handled shut-off valve. The background is a light-colored wall with some faint markings. A date stamp in yellow text is visible in the upper right corner of the image.
